

Dear Teachers,

Dynamic Math is a company founded by teachers, and so we understand just how difficult your job can be.

This is why we have set out to help you by providing a complete curriculum-based math book so that you don't have to spend time searching for the right resource. Our efforts provide the means for you to get right to teaching, helping your students succeed in math.

Additionally, we provide resources such as extra worksheets and tests, with answer keys. These additional options are available with a minimum purchase, and since our books are up to 70% less than traditional textbooks, this provides you with a very affordable option to implement the Dynamic Math program in your school.

Both Online & Offline Resources

We know that every teacher has their own unique teaching style and have students that all learn in different ways. That's why we offer our resources in both the printed and digital flipbook format.

So, whether you prefer flipping through a hard copy on your desk or accessing the full book from your tablet while sitting on the couch, we have you covered.

With books that are 100% aligned to the curriculum for each province, you can be confident that the right resource is at your fingertips.

Our math books provide students with all the instructions and exercises right at their desk, while our digital flipbook and other resources provide teachers with a quick and easy way to project any of the content to a screen or smartboard.

This provides a truly interactive way to go through the material in the classroom and ensures that students are following along.

Combined with Dynamic Math optional videos, we are convinced that teachers, their students, and their families will confidently work through the learning requirements each year, in both the classroom and at home.

Table of Contents

BC Grade 6 Mathematics

	Page
Unit 1 – Number Concepts	
1.1 Place Value	2
1.2 Rounding Numbers	11
1.3 Solving Problems with Large Numbers	14
1.4 Factors and Multiples	18
1.5 Greatest Common Factor and Least Common Multiple	23
1.6 Improper Fractions and Mixed Numbers	27
1.7 Ordering and Comparing Fractions and Decimals	33
Unit 2 – Ratio, Percent, Integers, and Decimals	
2.1 Multiplication and Division of Numbers	48
2.2 Ratio	57
2.3 Percent	61
2.4 Multiplying and Dividing Decimals	66
2.5 Problem Solving with Decimals	74
2.6 Order of Operations	78
Unit 3 – Financial Literacy	
3.1 Money Calculations and Change	94
3.2 Planning and Budgeting	98
Unit 4 – Patterns	
4.1 Number and Symbol Patterns	111
4.2 Relationships with Tables of Values	115
4.3 Patterns in Tables and Graphs	118
4.4 Rules to Describe Relations and Predict Patterns	123
Unit 5 – Variables and Equations	
5.1 Placeholders and Variables	138
5.2 Representing Generalizations	144
5.3 Preserving Equality	150
Unit 6 – Measurement	
6.1 Types of Angles and Estimating Measures	165
6.2 Measuring and Drawing Angles	170
6.3 Perimeter of Polygons	173
6.4 Area of Rectangles	177
6.5 Volume	181
6.6 Capacity	185
Unit 7 – Shapes and Transformations	
7.1 Types of Triangles	200
7.2 Sorting and Drawing Triangles	204
7.3 Regular and Irregular Polygons	209
7.4 Congruent Polygons	213
7.5 Transformations of 2-D Shapes	216
7.6 Plotting Points and Transformations in the First Quadrant	219
Unit 8 – Statistics and Probability	
8.1 Line Graphs	236
8.2 Displaying, Graphing and Interpreting Data	243
8.3 Possible Outcomes and Experimental Probability	249
8.4 Theoretical Probability	253
Unit 9 – Applications of Curricular Competencies	
9.1 Communicating	268
9.2 Representing	272
9.3 Connecting	275
9.4 Reasoning	279
Answers to Exercises and Unit Tests	284
ABORIGINAL APPLICATIONS – End of Units 1, 2, 3, 4, 5, 6, 7, 8	

There are several skills that are important when working in mathematics. If you use these skills when you work on math questions, it will help you to think about how to get to the answers.

These skills are:

1. Communicating

Communicating is the process of expressing mathematical ideas and your understanding of them orally, visually, and in writing. To communicate, you use numbers, symbols, pictures, graphs, diagrams, and words to show that you know what is being said or asked. You are expected to be able to express, describe, explain, and apply mathematical ideas in several different ways.

2. Representing

Representing involves different ways of showing mathematical ideas. To represent, you use drawings, physical models, equations, charts, and graphs to help make things clearer so that you can answer the question.

3. Connecting

Connecting involves relating mathematical concepts to each other. You should also be able to connect mathematical ideas to the real world.

4. Reasoning

Reasoning involves understanding the relationships that apply to numbers, shapes, or operations. To reason, you have to define the relationship, analyze why it is true, and determine to what group of numbers, shapes, or operations it can be applied.

Unit 9 gives more details about each of these skills and gives you examples and questions to help you build your skills in these areas.
