

## 7D Conversion of Measurement Units

### Learn

Express 1.43 meters in centimeters.

#### Method 1

$$\begin{aligned}
 1.43 \text{ m} &= 1 \text{ m} + 0.43 \text{ m} \\
 &= 100 \text{ cm} + \underline{\hspace{2cm}} \text{ cm} \\
 &= \underline{\hspace{2cm}} \text{ cm}
 \end{aligned}$$

$$\begin{aligned}
 1 \text{ m} &= 100 \text{ cm} \\
 0.43 \text{ m} &= 0.43 \times 100 \text{ cm} \\
 &= 43 \text{ cm}
 \end{aligned}$$

#### Method 2

$$\begin{aligned}
 1.43 \text{ m} &= 1.43 \times \underline{\hspace{2cm}} \text{ cm} \\
 &= \underline{\hspace{2cm}} \text{ cm}
 \end{aligned}$$

Joseph's height is \_\_\_\_\_ centimeters.

## Learn Together

1. Express 3.5 kilograms in grams.

### Method 1

$$\begin{aligned} 3.5 \text{ kg} &= 3 \text{ kg} + \text{_____ kg} \\ &= \text{_____ g} + \text{_____ g} \\ &= \text{_____ g} \end{aligned}$$

$$\begin{aligned} 1 \text{ kg} &= 1,000 \text{ g} \\ 0.5 \text{ kg} &= 0.5 \times \text{_____ g} \\ &= \text{_____ g} \end{aligned}$$

### Method 2

$$\begin{aligned} 3.5 \text{ kg} &= 3.5 \times \text{_____ g} \\ &= \text{_____ g} \end{aligned}$$

2. Express 4.06 liters in milliliters.

$$\begin{aligned} 4.06 \text{ L} &= 4.06 \times \text{_____ mL} \\ &= \text{_____ mL} \end{aligned}$$

$$1 \text{ L} = 1,000 \text{ mL}$$

What is 4.06 liters in liters and milliliters?

To convert from a larger unit to a smaller unit, multiply.

1 meter = 100 centimeters

1 kilometer = 1,000 meters

1 kilogram = 1,000 grams

1 liter = 1,000 milliliters

# Chapter Practice

1. Which of the following statements is correct?

- (A) The value of the digit 2 in 32.489 is 0.1 times the value of the digit 2 in 14.25.
- (B) The value of the digit 2 in 32.489 is 10 times the value of the digit 2 in 14.25.
- (C) The value of the digit 2 in 32.489 is 0.01 times the value of the digit 2 in 14.25.
- (D) The value of the digit 2 in 32.489 is 100 times the value of the digit 2 in 14.25.

2. Which expressions are equal to  $3.45 \times 0.1$ ?  
Choose the **two** correct answers.

- (A)  $3.45 \times \frac{1}{10}$
- (B)  $3.45 \times 0.01$
- (C)  $34.5 \times 0.01$
- (D)  $34.5 \times 10$
- (E)  $0.345 \times 100$

**Solve! Heuristics:** Use Before-After Concept

Alex had three bottles of water.

He poured half the amount of water from Bottle A into Bottle B.

He then poured 0.12 liter of water from Bottle B into Bottle C.

Lastly, he poured 0.4 liter of water from Bottle C into Bottle A.

What was the amount of water in Bottle A in the end?

**Step 1****Understand**

What do I know from the problem?  
 How much water is there in each bottle at first?  
 What did Alex do?  
 What do the decimals represent?  
 What do I have to find?

**Step 2****Plan**

I can show the **Before-After** situations at each step.

4. Fill in the blanks.

(a)

D

Solid D is made up of

\_\_\_\_\_ unit cubes.

Its volume is \_\_\_\_\_ cubic units.

(b)

E

Solid E is made up of

\_\_\_\_\_ unit cubes.

Its volume is \_\_\_\_\_ cubic units.

(c)

F

Solid F is made up of

\_\_\_\_\_ unit cubes.

Its volume is \_\_\_\_\_ cubic units.

Different solids can have the same volume.

## Practice On Your Own

I. Fill in the blanks.

A

B

C

(a) Solid A is made up of \_\_\_\_\_ unit cubes.

Its volume is \_\_\_\_\_ cubic units.

(b) Solid B is made up of \_\_\_\_\_ unit cubes.

Its volume is \_\_\_\_\_ cubic units.

(c) Solid C is made up of \_\_\_\_\_ unit cubes.

Its volume is \_\_\_\_\_ cubic units.

(d) Solids \_\_\_\_\_ and \_\_\_\_\_ have the same volume.
