

Dear Parents,

Helping kids understand and apply mathematics knowledge and skills is a collective responsibility of parents, teachers, and principals.

Students need to learn mathematics in a way that will serve them throughout their lives. Understanding mathematics can provide our students with many job and career opportunities.

This is why students need to know why mathematics works the way it does, how to use it with confidence and competence when solving problems.

Understanding mathematics enables us to:

- Solve problems, make sound decisions and perform calculations with ease
- Explain how we solved a problem and why we made a particular decision
- Understand patterns and trends so that we can make predictions
- Understand Financial Literacy to manage time and money
- Handle everyday situations that involve numbers and feel confident

Before your child can learn mathematics, he or she needs to believe in his or her ability to do so. That's where you come in!

Parents, you are your child's first role model for learning. When you engage with your child in a supportive, relaxed atmosphere, your child will enjoy exploring the world of mathematics.

Dynamic Math is committed to helping parents and students. We understand that not everyone learns the same way, and not everyone feels the same about math. This is why we are continually working to create math resources that help students of all abilities, while supporting the many learning styles and varying levels of enthusiasm towards math.

From our clear concise instructions and straightforward guided examples to our additional practice material and tests, there's something to suit everyone. Combined with our video tutorials, students will be able to get a tutor-like experience from anywhere and at a fraction of the cost of standard tutoring or after-school help programs.

Table of Contents

Grade 7 Mathematics

	Page
Chapter 1 – Operations with Decimals and Percent	
1.1 Divisibility of Numbers	2
1.2 Addition and Subtraction of Decimals	11
1.3 Multiplication of Decimals	17
1.4 Division of Decimals	22
1.5 Percent	26
Chapter 2 – Decimals, Fractions, and Integers	
2.1 Fractions and Decimals (terminating and repeating)	46
2.2 Comparing and Ordering Fractions and Decimals	53
2.3 Greatest Common Factor and Least Common Multiple	61
2.4 Addition and Subtraction of Fractions	65
2.5 Addition and Subtraction of Integers	71
Chapter 3 – Patterns, Variables, and Equations	
3.1 Oral and Written Patterns	85
3.2 Tables of Value and Ordered Pairs	90
3.3 Graphs and Linear Relations	94
Chapter 4 – Variables and Equations	
4.1 Preservation of Equality and Use of Variables	110
4.2 Expressions and Equations	114
4.3 Evaluating Expressions	118
4.4 Problems and Equations of Form $x + a = b$	122
4.5 Problems and Equations of Forms $ax = b$; $x/a = b$, $a \neq 0$; and $ax + b = c$	126
Chapter 5 – Measurement	
5.1 Radius, Diameter, and Circumference of Circles	140
5.2 Central Angles and Drawing Circles	145
5.3 Perimeter and Area of Rectangles	149
5.4 Area of Triangles and Parallelograms	153
5.5 Area of Circles	158
Chapter 6 – 2-D Shapes and Transformations	
6.1 Parallel and Perpendicular Line Segments	172
6.2 Drawing and Constructing Segments and Bisectors	175
6.3 Plotting Points in Four Quadrants	180
6.4 Transformations of 2-D Shapes	185
6.5 Transformations in the Cartesian Plane	187
Chapter 7 – Statistics and Probability	
7.1 Measures of Central Tendency	205
7.2 Outliers in a Set of Data	211
7.3 Circle Graphs	214
7.4 Experimental and Theoretical Probability	221
7.5 Probabilities as Ratios, Fractions, and Percent	225
7.6 Independent Events and Sample Spaces	228
Answers to Exercises and Chapter Tests	241
