G6-13 Translations

The result of a translation is called the **image under translation**. You can use the **prime symbol** (') to label the image. Example: The image of P under translation is P'.

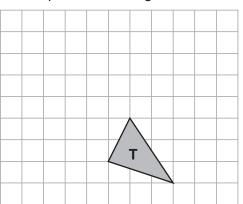

6. a) Use a ruler and protractor to measure the sides and the angles of the triangle.

	i)	A		В		ii)					
										F	
		С								E	
									4		
		AB =	mm	∠A =			DE =	_mm	$\angle D = $	_	
		AC =	mm	∠ B =			EF =	_mm	$\angle E = $	_	
		BC =	mm	∠C =			DF =	_mm	$\angle F = $	_	
b)		anslate the ti the vertices.	-	y translatin	g the ver	rtices. Use	e ′ to label the	images			
	i)	5 units righ	t and 2 ι	inits down		ii)	4 units left a	and 1 un	it up		
c)	Me	easure the si	des and	the angles	of the in	nage.					
	i)	A'B' =	mm	∠A′ =		ii)	D'E' =	mm	$\angle D' =$	 _	
		A'C' =	mm	∠ <i>B</i> ′ =			E'F' =	mm	$\angle E' =$	 	
		<i>B'C'</i> =	mm	∠ C ′ =			D'F' =	mm	$\angle F' =$	 	
d)	Wł	nat do you n	otice abo	out the side	es and an	ngles of th	e triangles an	d their i	mages?		
		r false? If the draw an exa			•	why. If the	statement is

								-			

7.

- a) Translate triangle T as given. Label the image T'. Then translate the image again from T' to T*.
 - i) 2 units up and 3 units left, then 1 unit up and 5 units right

ii) 4 units down and 3 units right, then 3 units up and 4 units left

- b) Draw arrows joining the corresponding vertices of triangles T and T*.
 What do you notice about the direction of the arrows? ______
- c) Measure the arrows in millimetres. What do you notice about the length of the arrows?
- d) Can you use one translation to take triangle T to T*? _____ If yes, describe the translation.

i) ____ units ____ and ____

ii) _____ unit _____ and unit

- 9. a) Draw a quadrilateral that is not a rectangle in the shaded zone on the grid. Label it Q.
 - b) Predict the result of combining two translations:

Q to Q′: 6 units right and 3 units down

 Q' to $\mathsf{Q}^*{:}\,4$ units left and 4 units down

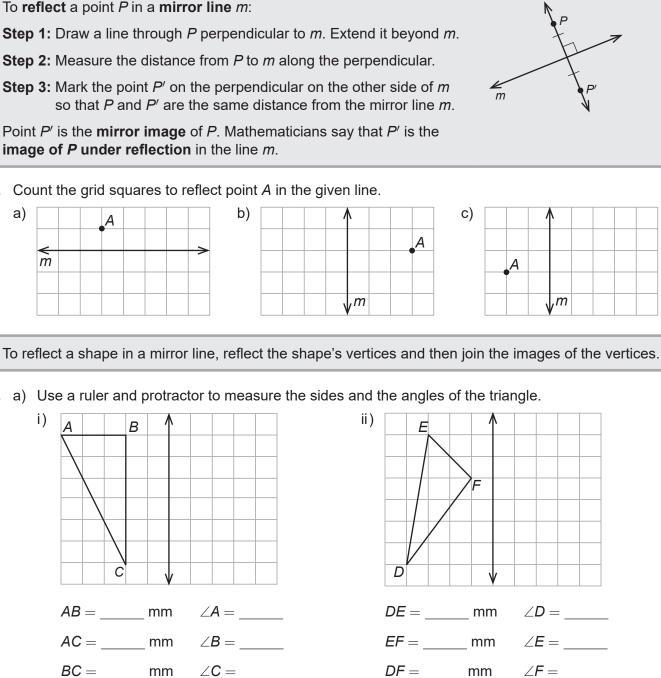

Q to Q*: _____ units _____ and

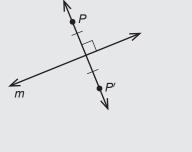

_____ units _____

c) Translate Q to Q' and Q' to Q* to check your prediction. Was your prediction correct?

10. Jax thinks translating a shape 3 units up and 4 units left, then 4 units right and 3 units down results in the original shape. Is he correct? Explain.

G6-14 Reflections

1. Count the grid squares to reflect point *A* in the given line.

2. a) Use a ruler and protractor to measure the sides and the angles of the triangle.

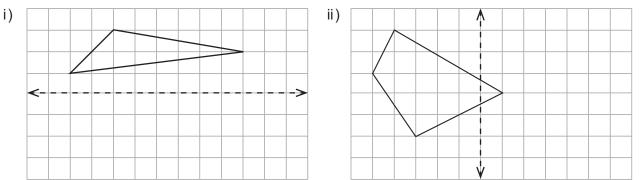

- c) Measure the sides and the angles of each image.
- i) $A'B' = _$ mm $\angle A' = _$ ii) $D'E' = _$ mm $\angle D' = _$ $A'C' = _$ mm $\angle B' = _$ mm $\angle E'F' = _$ mm $\angle E' = _$ $B'C' = ___mm \quad \angle C' = ___$ $D'F' = ___mm \quad \angle F' = ___$ d) What do you notice about the sides and the angles of each triangle and its image?

Do reflections take triangles to congruent triangles?

Geometry 6-14

3. a) Reflect the polygon in the given mirror line.

midpoint

b) Draw a line segment between each vertex in part a) and its image. What do you notice about the line segments?

The **midpoint** of a line segment is the point halfway between the end points of the line segment.

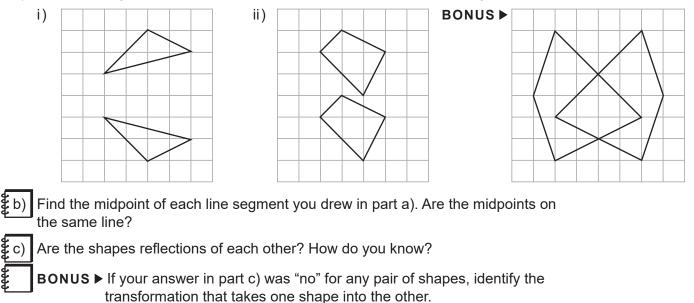

c) On the grids above, mark the midpoints of the line segments you drew in part b).What do you notice about the midpoints?

The shapes *ABC* and A'B'C' are mirror images of each other when:

line segments between each vertex and its possible image are parallel; and
all the midpoints of these line segments fall on the same perpendicular line.

Note: The line segments between the vertices have different lengths.

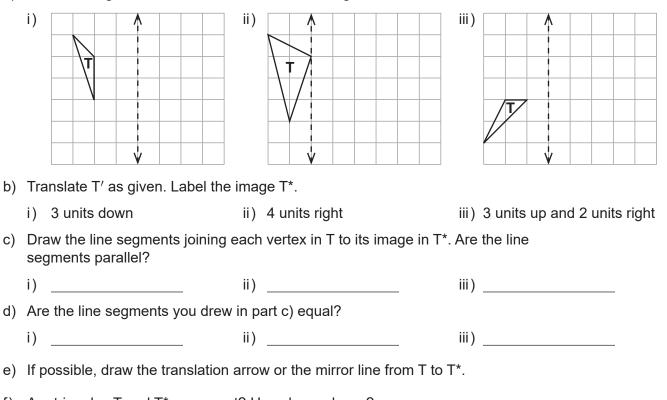

4. a) Draw line segments between the vertices of the shape and their images.

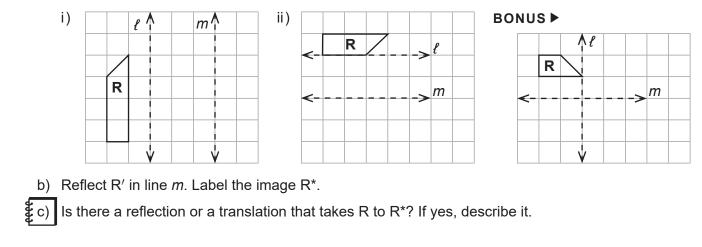

5. Fill in the table to summarize what happens to a shape that is reflected. What happens when a shape is translated?

Transformation	Lengths of Sides	Sizes of Angles	Orientation
Reflection			
Translation			

6. a) Reflect triangle T in the mirror line. Label the image T'.

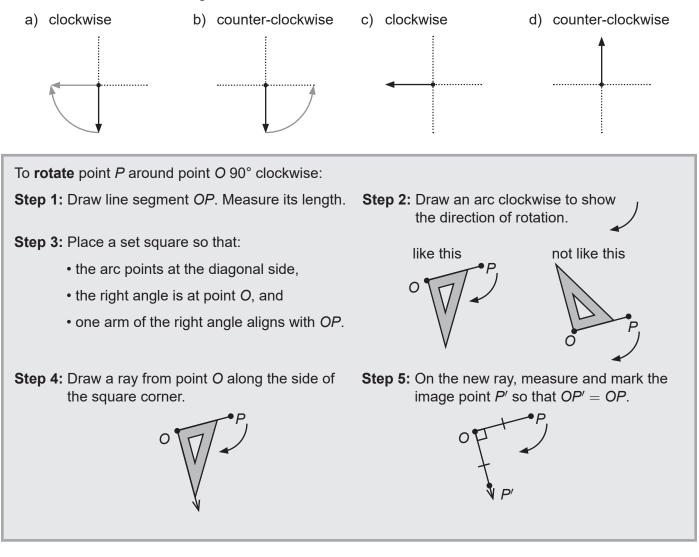

- f) Are triangles T and T* congruent? How do you know?
- **7.** a) Reflect the trapezoid R in line ℓ . Label the image R'.

Geometry 6-14

G6-15 Rotations

1. From the dark arrow, draw an arc showing the direction of the given 90° turn. Draw the arrow after turning.

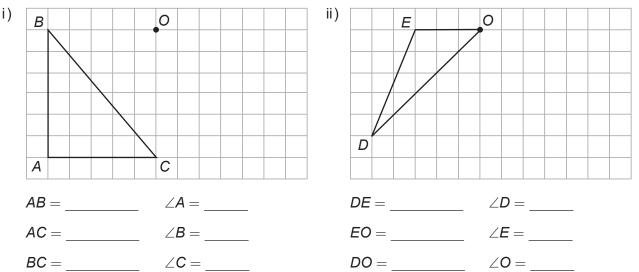

- **2.** Rotate point P 90° around point O in the direction given. Label the image P'.
- a) clockwise
 b) counter-clockwise
 c) clockwise
 d) counter-clockwise
 d) counter-cl

To rotate a shape around point *O*, rotate the shape's vertices and join the images of the vertices.

The point *O* is called the **centre of rotation**. The centre of rotation can be outside, inside, or on a side of the shape. The centre of rotation is the only **fixed point** during a rotation; it does not move.

4. a) Measure the sides and the angles of the triangle.

- b) Rotate the triangle 90° counter-clockwise around point *O*. Use ' to label the vertices of the image.
- c) Measure the sides and the angles of the image.

i) <i>A'B'</i> = ∠ <i>A'</i> =	ii) <i>D'E'</i> =	∠D′ =
<i>A′C′</i> = ∠ <i>B′</i> =	E'O =	∠ E ′ =
<i>B'C'</i> = ∠ <i>C'</i> =	D'O =	∠0 =

- **5.** True or false? If the statement is true, explain why. If the statement is false, draw an example showing it is false.
 - a) A polygon and its image under rotation are congruent.
 - b) If two polygons are congruent, there is always a rotation that takes one polygon onto the other.
- **6.** Fill in the table to summarize. What happens to a polygon that is reflected? Translated? Rotated?

Transformation	Lengths of Sides	Sizes of Angles	Orientation
Reflection			
Translation			
Rotation			

Geometry 6-15

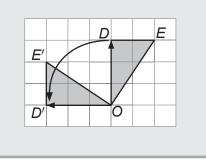

You can rotate a triangle 90° using a grid instead of a set square.

Triangle *OED* has a horizontal side 2 units long and a vertical side 3 units long.

Rotations take triangles to congruent triangles. A rotation of 90° takes horizontal lines to vertical lines and vertical lines to horizontal lines.

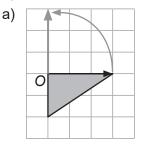

Triangle OE'D' has a horizontal side 3 units long and a vertical side 2 units long.

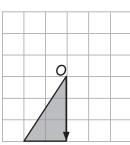

b)

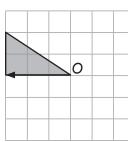

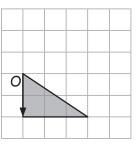

d)

7. Rotate the triangle 90° counter-clockwise around point *O*. Start with the side marked by an arrow. Hint: Note the direction first.

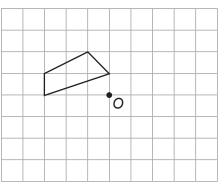

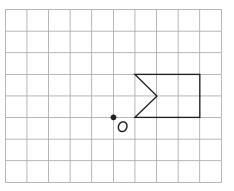

To rotate a point on a grid 90° clockwise around the point O: **Step 1:** Draw line segment *OP*. **Step 2:** Shade a right triangle with *OP* as one side. **Step 3:** Rotate the triangle 90° clockwise around O. **Step 4:** Mark the image point.

c)

- **8.** Imagine the triangles to rotate the vertices of the polygon around the point *O*. Join the vertices to create the image of the polygon.
 - a) 90° clockwise

b) 90° counter-clockwise

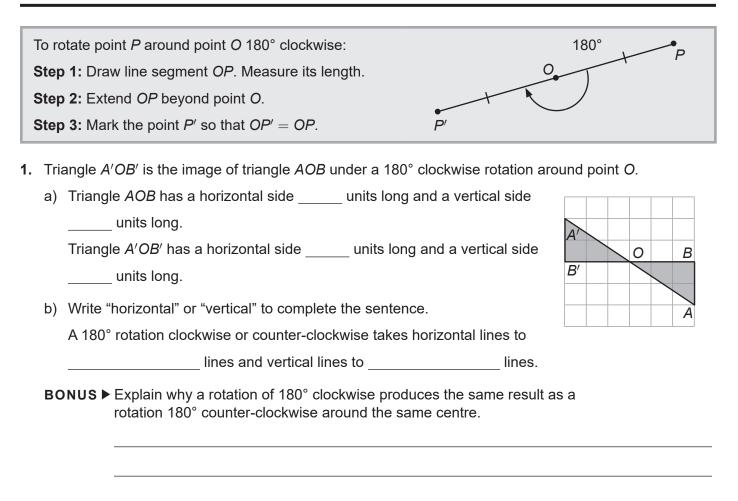

BONUS ► Use a ruler to draw a scalene obtuse triangle *ABC*. Find the midpoint of side *AC* and label it *M*. Rotate triangle *ABC* 180° clockwise around point *M*. What type of quadrilateral do triangle *ABC* and its image make together? Explain.

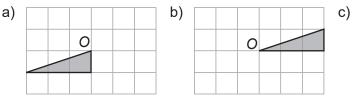

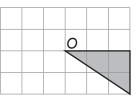

Geometry 6-15

G6-16 More Rotations

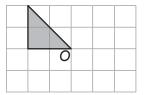

2. Rotate the triangle 180° clockwise or counter-clockwise around point *O*. Start with a horizontal or a vertical side.

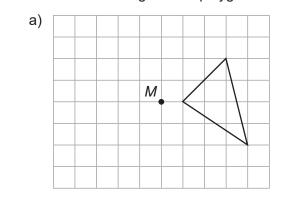

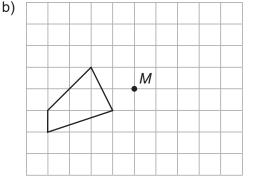

d)

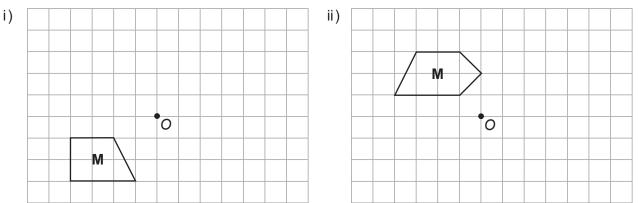

3. Rotate the vertices of the polygon 180° clockwise around point *M*. Join the vertices to create the image of the polygon.

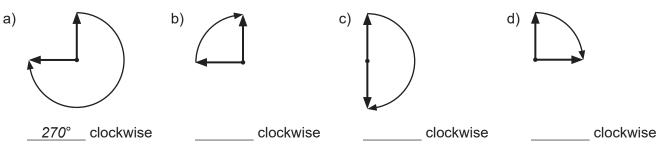

Geometry 6-16

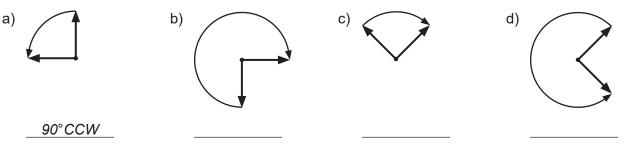

4. a) Rotate polygon M 90° clockwise around point O. Label the image M'.

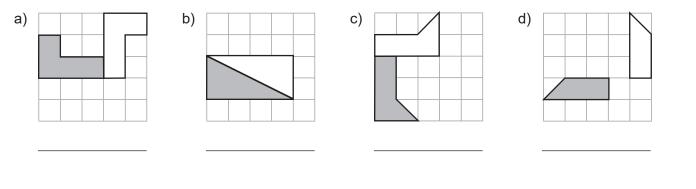

- b) Rotate polygon M' 90° clockwise around point O. Label the image M*.
- c) Which rotation around point O takes polygon M to polygon M*? ____
- 5. How much did the thick arrow turn? Write "90°," "180°," or "270°."

6. How did the thick arrow turn? Use CW for clockwise and CCW for counter-clockwise.

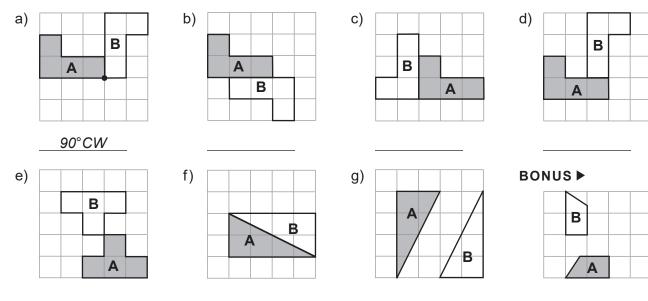

7. Was the grey shape rotated 90° CW, 90° CCW, or 180° CW or CCW to get the white shape? Write the amount and direction of rotation.

Geometry 6-16

8. Shape B is the image of Shape A under rotation. Mark the centre of rotation and describe the rotation.

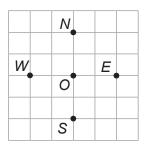

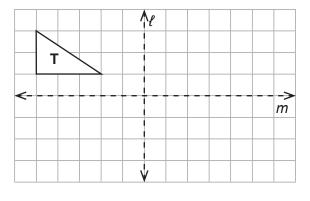

- 9. Dory rotates point *N* around point *O* as given. What is the image point?
 - a) 90° CW, then another 90°CW: _____
 - b) 90° CW, then 180°CW: _____
 - c) 180° CCW, then another 180°CCW: _____
 - d) 180° CW, then 90°CW: _____
 - e) 90° CW, then 90°CCW: _____

10. a) Reflect triangle T in line ℓ . Label the image T'.

- b) Reflect T' in the line m. Label the image T*.
- c) Reflect T in the line *m*. Label the image T".
- d) Reflect T'' in the line ℓ . Label the image T**.
- e) What do you notice about T* and T**?

f) Which transformation takes T to T*? Draw the translation arrow, the mirror line, or the centre of rotation and describe the transformation.

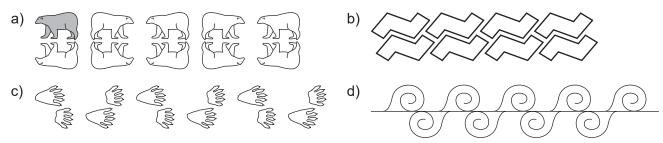

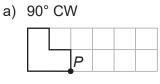

Geometry 6-16

G6-17 Designs and Transformations

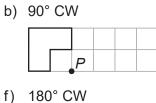

1. Shade the smallest part that is transformed to create the pattern.

2. Rotate the polygon around point *P* as given.

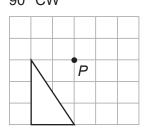

e) 90° CCW

c) 180° CW P

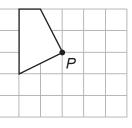

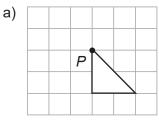

BONUS ► 90° CCW

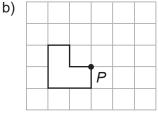

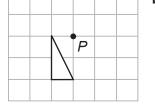

3. Create a design by rotating the polygon repeatedly 90° clockwise around point P.

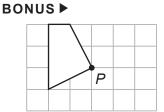

Ρ

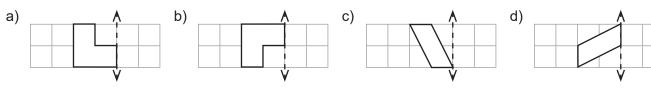

Ρ

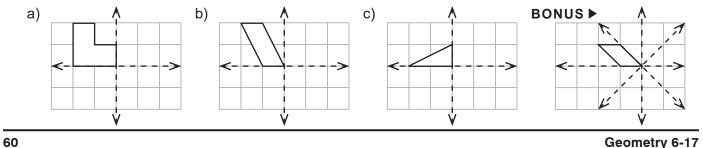

4. Reflect the polygon in the mirror line.

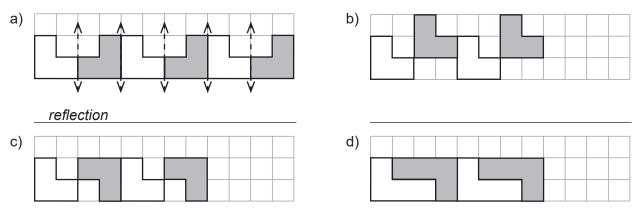

c)

5. Create a design by reflecting the polygon repeatedly in the mirror lines.

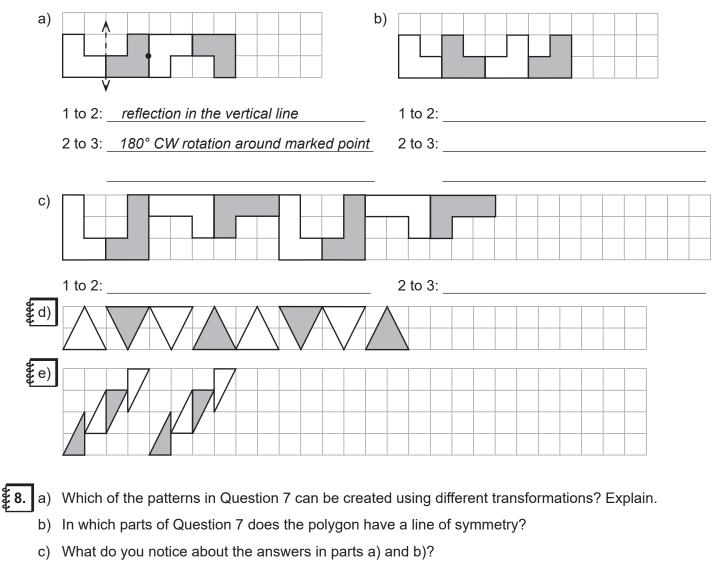

Geometry 6-17

6. The pattern is made by repeating the same type of transformation. Continue the pattern. Identify the type of transformation used. Draw the mirror lines, the translation arrows, or the centres of rotation between each polygon and the next.

7. Continue the pattern. Describe the transformation that takes each shape to the next.

Geometry 6-17

- **9.** Use the polygon and the grid to create a pattern by repeatedly applying the given combination of transformations.
 - a) Reflect in the top side, then translate 3 units right and 1 unit down.

Reflect in the top side, then translate 3 units right.
 Reflect in the bottom side, then translate 3 units right.

c) Rotate 90° CW around the bottom-right vertex.

d) Reflect in the side common to the polygons, then translate 4 units right. Reflect in the vertical line through the rightmost vertex or vertices.

\langle													

- **10.** a) Use grid paper. Draw a polygon that has no lines of symmetry.
 - b) Use the polygon you drew in part a) to create a pattern. Use at least two transformations of different types to create your pattern. Describe your pattern.
- **11.** a) Use grid paper. Draw a polygon that has a line of symmetry.
 - b) Use the polygon you drew in part a) to create a pattern. Use at least two transformations of different types to create your pattern. Describe your pattern.
 - c) Describe the pattern you created using different transformations. If you cannot, try a different pattern.

12. Draw a rectangle around the smallest part that is transformed to create the pattern. Describe the transformations used to create the pattern.

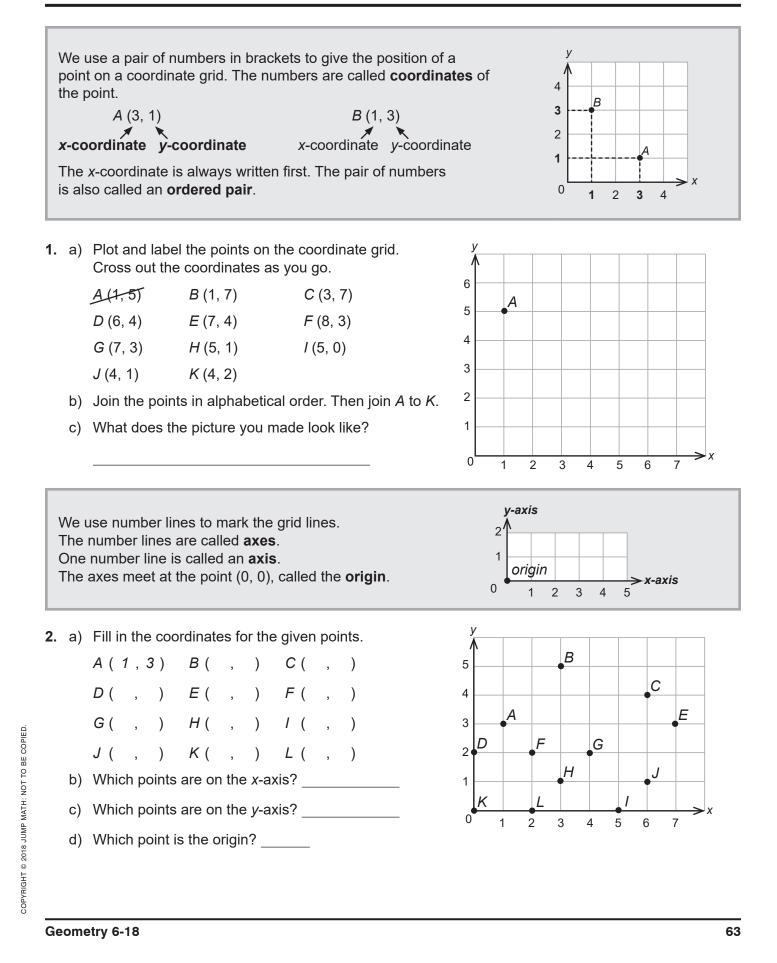

BONUS ► Find a pattern that is made using transformations. Draw the pattern. Describe the transformations used.

a)

G6-18 Coordinate Grids

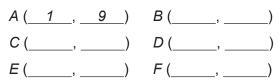

3. a) Plot and label the points on the coordinate grid. Cross out the coordinates as you plot them.

A (0, 4)	<i>B</i> (4, 5)	C (2, 1)
D (4, 2)	<i>E</i> (4, 1)	F (0, 0)
G (2, 4)	H (0, 3)	

- b) Join the points in alphabetical order. Then join *A* to *H*.
- c) What letter have you drawn? _____
- 4. a) Find the coordinates of the points.

b) Plot and label the points.

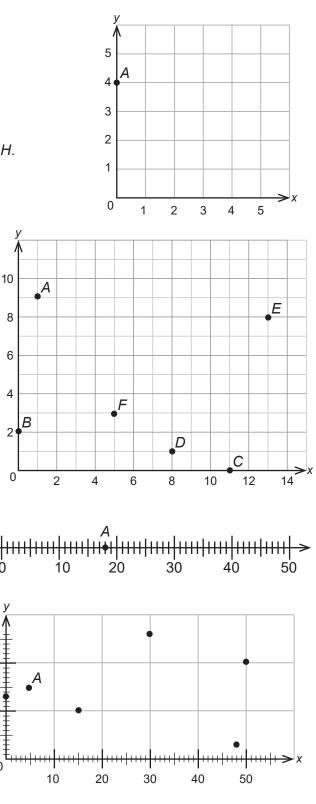

G (4, 6)	H (7, 10)	<i>I</i> (10, 7)
J (5, 11)	K (3, 0)	L (0, 7)
<i>M</i> (13, 3)	N (7, 5)	O (0, 0)

- 5. a) Mark the points on the number line.
 - A 18 B 5 C 31 D 48
 - b) Label the points marked on the coordinate grid. Use a ruler to line up the points with the axes.

A (5, 15)	B (50, 20)
C (48, 3)	D (0, 13)

- *C* (48, 3) *D* (0, 13) *E* (15, 10) *F* (30, 26)
- BONUS ► Use a ruler to mark the points on the
 - coordinate grid. H(25, 10)

G(5, 0)	H (25, 10)
I (40, 15)	J (35, 5)

6. a) Draw a coordinate system on 1 cm grid paper. Skip count by 5s to label the axes.

- b) Plot the points in each group and join them to create a polygon. Identify the polygons.
 - i) P (5, 10), Q (10, 25), R (15, 10), S (20, 25) ii) T (1, 5), U (1, 20), V (12, 5), W (12, 20)

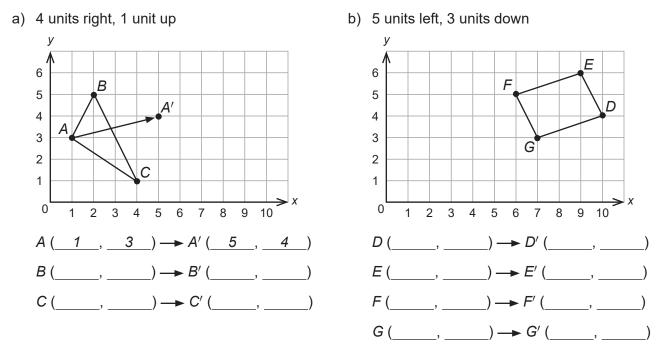

20 .

G6-19 Translations and Reflections on a Coordinate Grid

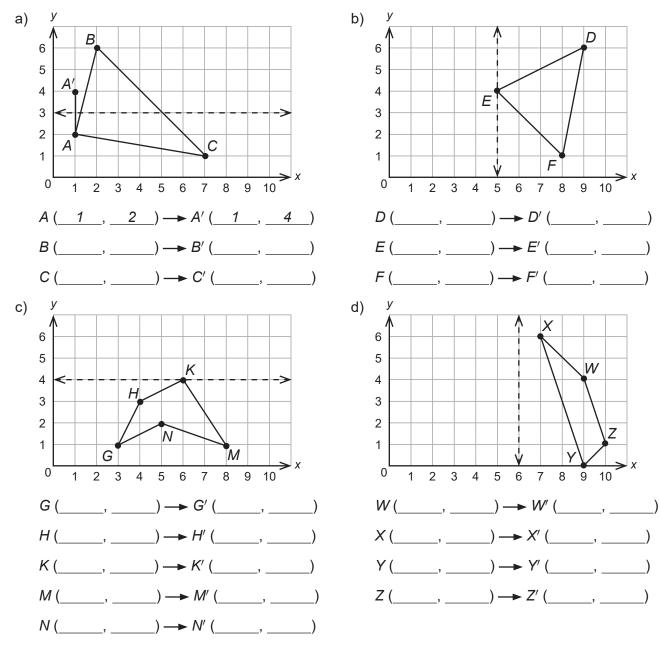

1. Translate the polygon by translating the vertices as given. Write the coordinates of the vertices before and after the translation.

2. Write the coordinates of the vertices of the original and the image. Describe the change in the coordinates. Then describe the translation.

Geometry 6-19

3. Reflect the polygon by reflecting the vertices in the given line. Write the coordinates of the vertices before and after the reflection.

- 4. Use your answers in Question 3 to answer the question.

 - b) The coordinates of which points did not change under the reflection? _____ and _____
 Why did that happen? _____

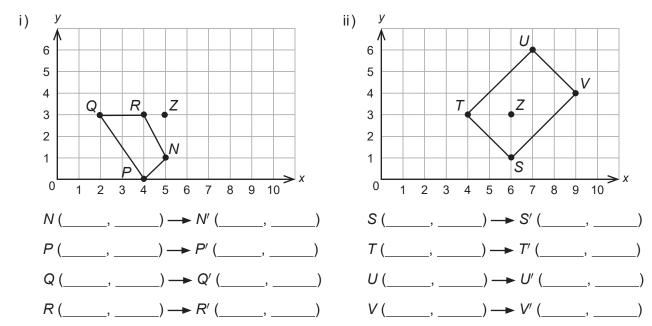

COPYRIGHT © 2018 JUMP MATH: NOT TO BE COPIED

Geometry 6-19

66

2. a) Rotate the polygon 180° clockwise or counter-clockwise around point *Z* by rotating the vertices. Write the coordinates of the vertices before and after the rotation.

b) Which points are on the same horizontal or vertical line as the centre of rotation?

		Horizontal	Vertical
i)	original points		
	image points		
ii)	original points		
	image points		

c) Which original points have the same x-coordinate as their image under a

180° rotation around point *Z*?

Which original points have the same y-coordinate as their image under a

180° rotation around point *Z*?

- d) What do you notice about the answers to part b) and the answers to part c)? Explain.
- **3.** Translate quadrilateral *STUV* from Question 2.1 unit left and 1 unit down. Label the image $S^*T^*U^*V^*$. What do you notice about the quadrilaterals S'T'U'V' and $S^*T^*U^*V^*$? Which vertices of S'T'U'V' and $S^*T^*U^*V^*$ match?

- a) Simon thinks that if he rotates point (5, 0) clockwise 180° around point (5, 3), **t 4**. he will get a point with x-coordinate 5. Is he correct? Explain.
 - b) Kathy thinks that if she rotates point (5, 0) clockwise 90° around point (5, 3), she will not get a point with x-coordinate 5. Is she correct? Explain.
- **5.** a) Plot points A (2, 1), B (2, 5), and C (6, 5) on a coordinate grid.
 - b) Find point D so that ABCD is a square. What are the coordinates of point D?
 - c) Rotate ABCD 90° clockwise around the point R (4, 3). Use * to label the images. Write the coordinates of the vertices of $A^*B^*C^*D^*$.
 - d) What do you notice about the polygons ABCD and $A^*B^*C^*D^*$? Explain.

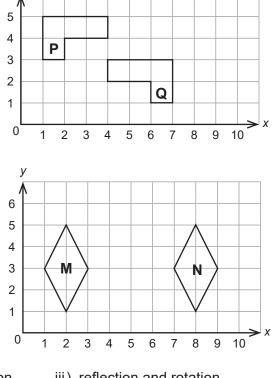

BONUS \triangleright a) Plot points E(0, 3), F(2, 0), G(8, 3) on a coordinate grid.

- b) Find point *H* that is not on the axes so that *EFGH* is a parallelogram. What are the coordinates of point H?
- c) What is the smallest clockwise rotation around point R (4, 3) that would bring EFGH to itself, moving some points but leaving the overall shape the same? How do you know?

V

6. Describe two different ways to take polygon P to polygon Q. Use different transformations. You might need to combine transformations.

Include the amount and direction of translation, mirror line, the coordinates of the centre of rotation, and the angle and direction of rotation in your description.

7. a) Describe a translation, a reflection, and a rotation that take polygon M to polygon N.

> Include the amount and direction of translation, mirror line, the coordinates of the centre of rotation, and the angle and direction of rotation in your description.

- b) What are the coordinates of each vertex of polygon M and its image under each transformation?
- c) Which vertices of polygon M have the same image under each pair of transformations described in part a)?

translation and reflection ii) rotation and translation i)

iii) reflection and rotation

Draw two congruent shapes A and B that require more than one transformation to 8. take A to B. Describe the sequence of transformations that takes A to B.

Geometry 6-20
