

Dear Parents,

Helping kids understand and apply mathematics knowledge and skills is a collective responsibility of parents, teachers, and principals.

Students need to learn mathematics in a way that will serve them throughout their lives. Understanding mathematics can provide our students with many job and career opportunities.

This is why students need to know why mathematics works the way it does, how to use it with confidence and competence when solving problems.

Understanding mathematics enables us to:

- Solve problems, make sound decisions and perform calculations with ease
- Explain how we solved a problem and why we made a particular decision
- Understand patterns and trends so that we can make predictions
- Understand Financial Literacy to manage time and money
- Handle everyday situations that involve numbers and feel confident

Before your child can learn mathematics, he or she needs to believe in his or her ability to do so. That's where you come in!

Parents, you are your child's first role model for learning. When you engage with your child in a supportive, relaxed atmosphere, your child will enjoy exploring the world of mathematics.

Dynamic Math is committed to helping parents and students. We understand that not everyone learns the same way, and not everyone feels the same about math. This is why we are continually working to create math resources that help students of all abilities, while supporting the many learning styles and varying levels of enthusiasm towards math.

From our clear concise instructions and straightforward guided examples to our additional practice material and tests, there's something to suit everyone. Combined with our video tutorials, students will be able to get a tutor-like experience from anywhere and at a fraction of the cost of standard tutoring or after-school help programs.

Grade 10 Mathematics

Table of Contents

	Page		Page
Chapter 1 – Linear Measure & Proportional Reasoning		Chapter 5 – Multiplying and Factoring Polynomials	
1.1 The SI and Imperial Systems of Measure	2	5.1 Constant Terms, Coefficients, and Variables in Polynomial Expressions	141
1.2 Units of Length in SI and Imperial Systems	4	5.2 Addition and Subtraction of Polynomials	145
1.3 Converting Units of Length Within Each System	8	5.3 Multiplying Polynomials by Monomials	147
1.4 Units of Measure – Estimating Length With Referents	13	5.4 Dividing Polynomials by Monomials	150
1.5 Solving Problems Involving Linear Measure	17	5.5 Multiplying Polynomials	153
1.6 Ratio and Proportional Reasoning	22	5.6 Common Factors	158
1.7 Converting Systems of Measure Using Unit Analysis	25	5.7 Factoring Trinomials of the Form $x^2 + bx + c$	160
1.8 Converting Systems of Measure Using Proportional Reasoning	27	5.8 Factoring Trinomials of the Form $ax^2 + bx + c$	164
Chapter 2 – Surface Area and Volume		5.9 Factoring the Difference of Squares	167
2.1 Review of Area and Perimeter of Quadrilaterals and Circles	35	5.10 Solving Quadratic Equations by Factoring	169
2.2 Surface Area and Volume of a Prism	40	Chapter 6 – Relations and Functions	
2.3 Surface Area and Volume of a Pyramid	46	6.1 Graphs	178
2.4 Surface Area and Volume of a Cylinder	52	6.2 Relations	182
2.5 Surface Area and Volume of a Cone	55	6.3 Representing Data Using Function Models	193
2.6 Surface Area and Volume of a Sphere	58	6.4 Defining a Function	197
Chapter 3 – Trigonometric Ratios		6.5 Domain and Range of a Function	202
3.1 The Pythagorean Relationship (Review)	66	6.6 Determining Rules or Relationships in Data	208
3.2 The Trigonometric Ratios	71	6.7 Function Notation and Relations	216
3.3 Finding Sides and Angles of Triangles	75	Chapter 7 – Linear Relations	
3.4 Solving Problems Using Trigonometry	78	7.1 Characteristics of a Linear Relation	230
3.5 Solving More Problems Using Trigonometry	81	7.2 Slope of a Line	235
Chapter 4 – Factors, Irrationals, and Powers of Numbers		7.3 Slopes of Parallel Lines	239
4.1 Multiples and Factors	89	7.4 Slopes of Perpendicular Lines	242
4.2 Least Common Multiple and Greatest Common Factor	95	7.5 Graphing Using Tables of Values	245
4.3 The Real Number System	100	7.6 Standard Form and Slope-Intercept Form	251
4.4 The Root of a Number	106	7.7 Using the Slope-Intercept Form and Slope-Point Form	259
4.5 Simplifying Radicals	117	Chapter 8 – Systems of Linear Equations in 2 Variables	
4.6 Review of Laws of Exponents	122	8.1 Solving a System by Graphing	274
4.7 Laws of Exponents for Rationals	127	8.2 Solving a System by Substitution	281
4.8 Applications of Rational Exponents	132	8.3 Solving a System by Elimination	283
		8.4 Word Problems Involving 2 Equations in 2 Unknowns	286
		8.5 Problems Involving Systems of Equations	289
		Answers to Exercises and Chapter Tests	296
